

Lead Screening in Children (LSC)

The measure includes children 0-2 years of age who were continuously enrolled in Louisiana Medicaid during the measurement year. The rate (percentage) shows how many of these children had one or more capillary or venous lead blood tests for lead poisoning by their second birthday.

Notes:

- Rates shown are for Medicaid-only recipients.
- Rates shown for 2007 through 2011 exclude Medicare dual eligibles and third-party liability.
- Claims for 2007 through 2011 have a 6-month claim lag.
